

**General Arrival Dates for Selected Neo-tropical Migrant Songbirds that breed at
OAEC**

These are just opportunistic observations by Brock Dolman with no specific survey rigor. In my experience, as I have become more attentive to this process, the pattern of the latter years has become more consistent than the early years.

Enjoy and track your own list for your home!!

For those more interested in tracking the seasonality of birds in the county, I would recommend you purchase the books: *Birds of Sonoma County* by Ben Parmeter, et al., and *The Sonoma County Breeding Bird Atlas* by Madrone Audubon. I have seen these for sale at Copperfields or just call Madrone Audubon.
